commercial glazing

## Commercial Glazing Capability Brochure.

Delivering Quality, Precision, and Reliability Across  
Every Project.

# Glazing delivered safely, clearly and fully in-house for operational buildings.

Newbury Commercial Glazing designs, manufactures and installs glazing projects under one roof — giving estates teams, public-sector organisations and commercial clients clear specifications, predictable timelines and complete accountability.

Family-run glazing contractors with over 25 years' experience delivering projects in live environments.

## Who We Work With

Our process is built around buildings that must remain open and operational.

We work with clients responsible for environments where safety, disruption and accountability matter most.

These environments demand glazing work that is carefully planned, clearly communicated and delivered without disruption — supported by professional documentation and experienced site teams.

Schools and education estates

Public-sector and local authority buildings

Commercial and operational sites

## Our Straightforward Process

# Simple steps. No chasing multiple suppliers.

### 1. Survey

We assess your requirements and existing glazing.

#### What We Establish

- Key stakeholder requirements
- Programme constraints & deadlines
- Technical specifications and compliance needs

### 2. Quotation

You receive a clear scope and competitive pricing.

#### What You'll Get

- Detailed drawings & elevations for approval
- Clear material specifications & scope definition
- Early identification of potential issues or constraints

### 3. Delivery

Repairs, replacements or installations are completed safely and efficiently.

#### What We Control

- Consistent product quality through in-house fabrication
- Production timelines aligned with project schedules
- Reduced reliance on external suppliers for critical components

### 4. Ongoing support

We remain available for future maintenance and additional work.

#### What We Control

- Transparent project timeline with clear milestones
- Regular communication on sequencing and access
- Real-time updates on progress and any potential delays

What Makes Our Process Different

## Design, fabrication and installation under one roof.

This approach delivers:

That means there are no gaps between stages, which is where glazing projects often run into problems caused by fragmented responsibility and unclear scope.

The result is less risk and one accountable partner throughout the project.

Clearer specifications from the outset

Safer delivery in occupied buildings

Predictable timelines you can plan around

Professional, proactive communication

Confidence when justifying supplier choice internally

Working Safely in Live Environments

## Safety is built into how we work - not added as an afterthought.

Our teams are experienced in schools, public buildings and operational sites where safeguarding, reputation and continuity are critical.

We provide:

- Enhanced DBS-checked, NVQ qualified installers
- Clear RAMS and NPPV Level 2
- Controlled working practices and structured communication
- Minimal disruption to staff, students and the public

Newbury Commercial Glazing adhere to recognised industry standards, including Constructionline Gold, SafeContractor, CHAS certified, ISO 45001 etc, ensuring work is carried out safely, professionally and with respect for live environments.

How This Applies Across Our Services

The same delivery standards apply, whatever the scale of work.

### Commercial Glazing Projects

End-to-end delivery for larger, planned works where coordination, programme certainty and accountability are essential.

### Small, Reactive & Emergency Works

Fast, clearly scoped response for urgent repairs and smaller works, delivered by dedicated teams.

### Trade Glazing Fabrication & Supply

In-house fabricated glazing units supplied with consistent quality, documentation and technical support.

In-House Manufacturing & Capability

Manufacturing control that translates directly into reliability on site.

By producing frame units in-house, we maintain consistent quality standards, reduce reliance on fragile supply chains and align production closely with agreed programmes.

This provides:

- Consistent quality control via our ISO 9001 Quality Management System
- Realistic lead times without third-party risk
- Clear accountability from manufacture through to installation
- Reduced programme uncertainty and confidence in delivered products
